Flexible Thrombosis Care

FOR THE ASSISTED CARE

Thrombosis is a complex disease that requires flexible care. Treating patients with thrombosis can be time-consuming for your healthcare team. Capillary blood collection (finger prick), Point of Care Testing (POCT) and the online aided care portal of Thrombosis Flex Care make the daily work of your health care providers a lot more efficient and pleasant. In addition, the patient experiences more convenience due to the virtually painless finger prick.

Modern thrombosis service

Thrombosis Flex Care (TFC) offers modern and professional thrombosis care on Curaçao. Our state of the art approach allows you to help your patient when needed. In addition, your patient benefits from the flexible options and capillary blood collection method of TFC.

Thrombosis Flex Care is a part of Laboratorio de Medicos (LabdeMed), established in Curaçao. TFC is being supported by 'Nationale Trombose Dienst' (NTD) in the Netherlands.

Capillary blood collection: immediate result

A certified nurse from the TFC team will visit your patient(s) to measure the INR value. We use capillary blood collection and our POCT device registers the INR value immediately after measurement. Our nurse will enter the results into the assisted care portal and our dosing team then provides feedback within a few hours.

Just one drop of blood!

New dosing schedule
online within hours

Online health care portal

Your healthcare providers can log into the online assisted care portal containing the personal care files of their patients. The files contain the most recent measurements and dosing recommendations.

The online assisted care portal is accessible 24/7; allowing the nursing staff to also have the latest information during weekend or night shifts.

Thrombosis Flex Care works with state-of-the-art software specifically developed for the safe exchange of sensitive medical data.

- View online thrombosis patient file with, among other things, INR values, medication and medical history
- Up-to-date information available when needed
- 24/7 access, including weekend and night shifts
- As a result, prompt intervention in an emergency is possible

POCT health care providers training

Thrombosis Flex Care will also provide POCT training for health care providers where needed.

Professional support

Our qualified dosing team guarantees professional support. Your nursing staff can always contact them for advice.

Which advantages does Thrombosis Flex Care offer?

- Access to online health care portal
- Capillary test (finger prick): efficient and patient-friendly
- INR values immediately visible by means of mobile measuring device (POCT)
- Up-to-date information on dosing schedule

Registration healthcare institution

Would you like to use our flexible thrombosis care? Then you can register your health care institution at TFC through a call to +5999 736 1060. We will then visit you to complete the registration.

More information

You may have questions after reading this brochure or you would like to know more about our services. Please feel free to contact us without obligation for an exploratory talk or visit www.flexthrombosis-care.org.
